# FOR A BETTER AND SAFER FUTURE

World Intelligence is a company founded and developed especially for governments and intelligence centers, which are responsible for controlling and ensuring the security of the country.

World Intelligence has more than 10 years of experience, specialized in monitoring and controlling everything that happens on the Internet (Social Networks, News portals, Search Engines, Video platforms and Dark Internet / Darknet).

World Intelligence has a 100% proprietary technology platform, which allows to track, monitor and identify any information that is published on the Internet about a public entity, a government, protected persons or any other content that may

be useful, to avoid possible serious threats, possible terrorist attacks or any other type of suspicious alert, that could affect the life of the president, citizens or public entities that are visiting the country.

World Intelligence allows that the information published by any person or anonymous on the Internet can be located, identified and classified, so that the authorities of that country can act as they consider.

DO NOT BELIEVE THAT YOU  
KNOW IT GOOD, BECAUSE  
**TO KNOW ABSOLUTLY  
EVERYTHING IS  
MUCH BETTER?**

What is the use of rumors or unverified information?

**A team that is 100% specialized  
in detecting anomalies.**

# HOW DOES IT WORK?

## KNOW PRIORITIES

We have to know needs and priorities to monitor and control; For example: names and surnames of the persons to be protected, name of the country to be monitored, name of the event, name of the public entity.

1

2

## WE DELIVER YOU A CUSTOMIZED BUDGET

Once we know your needs and priorities, we will provide a fully customized budget within a maximum period of 48 hours. We do not have standard tariffs, nor discounts of 2x1, we take very seriously the security and the personal relationship with the client.

## FORMALIZE CONTRACT

If finally the budget is adapted to the needs, we will sign a confidentiality agreement (NDA) and a contract for the provision of services, where we will guarantee all the contracted services. The forms of payment and their terms are also specified in the contract for the provision of services.

3

4

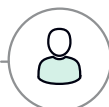

## WE CLASSIFY THE CONTENT

Our team classifies the detected content, generates graphs of people connected with those comments or profiles and notifies the corresponding authorities of the urgencies. Upload the rest of content detected in the Internal platform, so that it can continue to be analyzed and studied.

## WE FACILITATE ACCESS TO THE SYSTEM (INTRANET)

We give you username and password so that you can remotely access the intranet exclusively for Governments and Public Entities. From the system you can easily and intuitively control and monitor in real time the parameters and priorities established in point 1. Remember that all the information you see has been previously managed by the World Reputation team, classifying the content of more less important according to their interests.
